Haemochromatosis research study

A mixed methods investigation into the experience of patients with genetic haemochromatosis during and following treatment.

Project scope

We hope to understand your experiences whilst being treated (known as the “treatment” phase) and following treatment (known as the “maintenance” phase)

Project overview

We plan to observe and measure your experiences over a four-week time frame, where you will complete a series of tasks

Project requirements

- Daily diary to report your experiences
- Completion of two questionnaires at baseline and after 4 weeks

(completion via online methods, but paper based can also be considered for those not accustomed to technology)

Do I qualify?

- Confirmed diagnosis of heamochromatosis and currently in the “treatment” or “maintenance” phase
